Sep 2021 - Mar 2022

Psagot College | Rehovot, Israel

Completed the course with distinction , asked to teach a new subject area to the next courses.

PROJECTS

Someday

A team management app inspired by Monday.com. the app helps teams and organizations by tracking projects and workflows. I built it with 2 friends as final project. We built this project with **Vue.js**, **Sass** for styling, **MongoDB** and **sockets** functionality. I added AI for this project. I faced a problem with the OpenAI API being slow because every board has a lot of properties, so I decided to make it efficient and to get the most important fields from the AI, and then add the rest with another function and send it for a build.

Github - <https://github.com/DorTeri/Someday>

AI-marketplace

A market place for selling AI images prompts. Users can own a shop and sell prompts by uploading text file and images. Users can buy prompts from a user and see their orders. I built this project with **Next.js**, **TypeScript**, **Prisma**, **MongoDB** and used **Next UI** and **tailwindcss** for styling. I also built admin dashboard that I accept the uploaded prompts.

Github - <https://github.com/DorTeri/AI-Marketplace>

Snapgram

A social media app when users can share their photos, save posts, like posts, and search for posts on the explore page. I built this project with **React**, **TypeScript** and **Appwrite**. I used **Tailwindcss** for styling.
